1. Introduction

Project Overview

A simple, interactive desktop application designed to help learners build their personal English dictionary. The system allows users to enter words, their meanings, and examples to make studying and memorizing easier.

Objectives

- Provide a fast and lightweight tool to save new vocabulary.
- Help users track their progress by marking words they have memorized.

جامعة الزيتونة الاردنية
Al-Zaytoonah University of Jordan

- Practice Visual Programming concepts by building a simple, user-friendly graphical interface (GUI).

2. System Description

Target Audience

School students, university students, and individuals preparing for English proficiency exams (such as TOEFL , IELTS) .

Shafea / Vocabulary Builder

Project Scope

The system stores word data (Word, Meaning, Example, and Memorization Status) locally using simple text files or a local database. It displays the data in a structured table and provides basic controls to manage the vocabulary list.

3. Functional Requirements

The application supports the following CRUD operations:

جامعة الزيتونة الاردنية
Al-Zaytoonah University of Jordan

1. Add Word (Create)

The system provides input fields for:

- Word
- Meaning
- Example

2. View Words (Read)

21All saved words are displayed in a clear and organized data table.

3. Update Status (Update)

Users can mark words as:

- Not Memorized
- Memorized

(using a checkbox or similar control).

Shafea / Vocabulary Builder

4. Delete Word (Delete)

Users can remove selected words from the list using a delete button.

Al-Zaytoonah University of Jordan

4. Non-Functional Requirements

User Interface (UI)

The interface should be:

- Clean
- Simple
- User-friendly
- Easy to use without instructions

Reliability

- The application must work (offline).
- All data is stored locally on the user's device.
